

- m Personal Video Recorders (PVR)
- m PCs
- m Stereo and home theatres with hard disk drives (e.g., Music Servers)
- m Broadcast tuners
- m Video and imaging capture devices, such as cameras and camcorders
- m Multimedia mobile phones

Digital Home Renderer (DHR) Devices provide playback and rendering capabilities. Some examples of these devices include:

- m TV monitors
- m Stereo and home theatres
- m Printers
- m PDAs
- m Multimedia mobile phones
- m Wireless monitors
- m Game consoles

Value Proposition

For digital interoperability to succeed, consumers, manufacturers, service providers, and content providers must all see a strong value proposition. Consumers are unlikely to adopt and pay a premium for interoperable digital home products if they do not deliver on their promise of performance, capabilities, and simplicity. Likewise, CE, mobile, and PC manufacturers will have little motivation to develop digital home products if they do not provide clear business opportunities. The same applies to content and service providers who are looking for new venues and capabilities to distribute entertainment and services.

The following is an examination of the value proposition for digital home products as it relates to consumers, content and service providers, and manufacturers.

Consumers

The consumer will be able to purchase digital home renderer/server devices that communicate and collaborate with each other, allowing simple and seamless access to content throughout their home. Consumers will benefit from greater convenience and ease of use, and will have more flexibility in selecting a range of prod-
