here is how you can compare your results. First off, rip the song that you want to encode to a .WAV file using a free software such as EAC or dBPowerAmp to your hard drive. Next use Windows Media Player to rip the same song from the CD to a .WMA file and compare the results. The steps below will make this more clearer for you.

In Windows Media Player 10, click on the Rip tab in the default Window or from the Menu Bar, click on View-Go To- Rip. This will take you to the CD track list window.

Now click on Tools-Options. This will open a new window. Click on the Rip Music tab in this Window. In the Rip Settings box,

Setting the codec in Windows Media player 10

under the Format drop down list you will see the options available for ripping the track from the CD.

Choose any of the option that you want. If you are of the audiophile kind, the best would obviously mean choosing the Windows Media Lossless. As part of the Microsoft DRM program,
