

```
(Substitute your image file for background.gif) */
menubar, toolbox, toolbar, .tabbrowser-tabs {
    background-image: url("background.gif") !important;
    background-color: none !important;
}
```

It's easiest to place the image file in the same location as the `userChrome.css` file. The image can be of any image format supported by Firefox.

Make the active tab easier to distinguish

In order to make the active tab easier to distinguish among the currently opened tabs, you can also change the colors for the tabs. Add the following code to your `userChrome.css` file:

```
/* Change color of active tab */
tab{
    -moz-appearance: none !important;
}
tab[selected="true"] {
    background-color: rgb(222,218,210) !important;
    color: black !important;
}

/* Change color of normal tabs */
tab:not([selected="true"]) {
    background-color: rgb(200,196,188) !important;
    color: gray !important;
}
```
