

mat; for example, an Excel file shows up as consisting of rows and columns.

YDS can index standard file types such as Word, Excel, PowerPoint, Zip and HTML, and 300-odd other file types! You can search for any type of attachments in your mailbox. For indexing Messenger chat logs and Yahoo! contacts, you need to provide your Yahoo! ID.

Yahoo's maiden effort is commendable. In terms of usability and features, it is similar to Copernic's solution. We think that whether you settle for Copernic or Yahoo! is just a question of personal preference.
