

drag and drop files to be archived in the main window. Alternatively, right-clicking a file also brings up the options menu, which allows for changing the compression level, compression algorithm, etc.

7-Zip is an excellent compression utility

We compressed our test 204 MB ZIP file using 7-Zip. It took around 50 seconds to complete the zipping of the 204 MB to 202 MB. 7-Zip is therefore not the fastest, but if you want extra reduction in size, you can use the 7z format.

7-Zip is an excellent compression utility; however, the user interface means it will appeal to computer-savvy users and to, for example, developers who need to switch between Linux and Windows - as with ALZip.
