

Winamp not only plays audio but also video. There is also a proprietary video format for Winamp which is the .nsv format. Winamp also plays streaming online radio using Shoutcast. You can also download music by popular and not so popular artists from the Winamp Web site.

Winamp is one of the most used players on the face of this earth, and the only thing that we can say is may the tribe increase. Amen!

Tips for Winamp

1. Changing colours in Winamp

Winamp 5 (for that matter, even 3) has an interesting feature. Instead of skinning Winamp, you can choose various colours for different moods. For this, first, click the “Config” button on the main Winamp window. When the multi-tabbed dialog box appears below, click the “Colour Themes” tab. Now, choose a new colour theme as you desire by double-clicking a theme. “Varsity” is good when listening to music from the yesteryears. If the night bug’s bitten you, try the “City Night” colour.

When you are done, click the button with the small arrow pointed upwards next to the tabs. This closes the “Configuration Drawer”.

2. Use your own font instead of the regular Winamp font in the playlist window

Generally, the playlist font is determined by the current Winamp skin. All Winamp skins including the Modern and Classic skins have their own fonts, for that matter most skins downloadable over the Internet have their own fonts. So, if you don’t like these fonts and want your own, here’s what you do:

1. Right-click on the Winamp 5 title bar.
2. Choose “Options”, then “Preferences”.
3. When the “Preferences” dialog box appears, click “General Preferences”.
4. Click “Playlist”.
