

ing bones, but just about giving a good shake to our chairs and workstations! Headphones such as those from Rumblefx actually shake and vibrate according to the sound, and get you closer to the action!

Microsoft's Forec Feedback controllers

Technologies such as Microsoft's Force Feedback have been around for quite a bit, but they don't quite throw you onto the wheel of your (virtual) car. Adapt this technology to future hardware, and you'd be assured of an earth-shattering experience.

Now sight, sound and touch can be taken care of with improvements in existing technologies, but what about smell and taste? Wouldn't you love to get a whiff of burning rubber while skidding along or giving the cops a run for their badges? Digiscents has got just the thing lined up. They claim to

Digiscents' pathbreaking new gadget, The iSmell

have developed a device called iSmell which will be a 'speaker-sized computer peripheral device that attaches to the serial or USB port of your PC and plugs into a standard electrical outlet and emits naturally-based vapours into the user's personal space.'
