Most notebooks today have Wi-Fi built-in. In addition, you can equip desktop computers and older notebooks with cards that will make them Wi-Fi enabled. As far as mobile phones are concerned, Wi-Fi is only available in high-end PDA phones such as the O2 XDA Ili and the Nokia Communicator 9500. PDAs and PDA phones that do not have integrated Wi-Fi but which provide an SDIO slot can be made Wi-Fi enabled by using add-on Wi-Fi SD cards.
