

MMS should not be confused with Enhanced Messaging Service (EMS), which is simply Short Message Service (SMS) with additional payload capabilities, allowing mobile phone to send and receive messages that have special text formatting, animations, pictures, icons, sound effects and special ring tones.

4.1.3 EMS

Enhanced Messaging Service or EMS, is an application-level extension to SMS for cell phones available on GSM, TDMA and CDMA networks. An EMS-enabled mobile phone can send and receive messages that have special text formatting (such as bold or italic), animations, pictures, icons, sound effects and special ring tones. EMS messages, when sent to a device that does not support it, will be displayed as SMS transmissions. EMS is a cross-industry collaboration between Ericsson, Motorola, Siemens and Alcatel, among others.
