

9.10.2 Motherboard Monitor v5.3.7

For a complete description of Motherboard Monitor, and also to download it, visit www.softpedia.com/get/System/System-Info/Motherboard-Monitor.shtml

This program reads temperature and fan rpm data collected by the BIOS, displays it in the Windows system tray, and alerts you when there's trouble. You can use this application to manage your resources and alarms by doing things like setting an alarm to go off, or having an e-mail sent to another computer, when your motherboard starts to overheat. You could even have programs start and stop when your CPU reaches predetermined temperatures.
