

Sketch

The Sketch Filter effects are all black-and-white effects that convert your image into something that looks like a pencil sketch.

Styleize

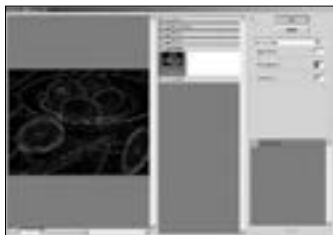

Here you have only one good psychedelic effect—Glowing Edges! This effect puts a neon-like glow on every edge that's visible in your image to give it a weird neon-painted look.

Texture

The Texture Filter set has six filters that include Craquelure, Mosaic Tiles and Stained Glass. These filters are pretty self-explanatory, and you can see the results of applying the filters below:

This covers a few of the effects that are available to you through the Filter Gallery. However, under the filter menu, you will find more filter effects, such as Blur, Noise, Render, etc.

Let's take a look at some more Filters:

The chrome effect gives your image a cool metallic look

Mosaic Tiles show you what it would look like if your image were painted onto tiles and put on a wall or the floor

The Stained Glass look converts an image into small cells that take on the predominant foreground colour of the image behind it
