

probably change soon. The latest version of Amarok (version 1.3.9) has several features that are cool enough to make you want to shift over to Linux, just to use them. For example, using the ID3 tag (for more on ID3 tags, see chapter 11) of a particular file, it can download the full lyrics of the song, along with cover art and even information from Wikipedia about the artist! Amarok also has a Playlist browser that allows users to scan various Playlists on their computers.
