

downloaded from The Pirate Bay. In our case the file is “Mahal Pictures.torrent”. In the resulting “Add New Torrent” dialog box, navigate to the .torrent file we created in step 13.2.1 “As” section as shown below.

Make sure the “Open for Seeding” and “Start when added” boxes are checked and click OK.

Congratulations! You are now seeding your file.

You will need to leave μ Torrent or your BitTorrent client running for a sufficient length of time for the seed to propagate to other peers. Send an e-mail to all your friends with the link to the torrent file. Once enough seeds spread to other peers, you can stop your client.

13.2.2 DIY: Create a tracker-less torrent

One of the annoyances of BitTorrent has been the need for a site to host the tracker that co-ordinates file sharing between peers and seeders. Many people don't have a Web site, so public tracker sites provide a useful service, but as the number of trackers begins to take a heavy toll on the bandwidth of the Internet, owners. To circumvent this problem the concept of a tracker-less torrent was introduced.

Creating a tracker-less torrent is somewhat tedious. The first step is to create other peers to locate your torrent is more difficult. In this section, we will discuss creating a tracker-less torrent first and then discuss the ways in which you can expose your torrent to peers. Since the current version of μ Torrent does not support creation of track-
