

TheOnion.com, the popular *faux* news site, is based on Drupal and shows the extent to which this CMS can be modified.

ProjectOpus.com, a music download site, uses Drupal as its base.

8.8 XOOPS

8.8.1 Introduction

XOOPS is a free Content Management System released under the terms of the GPL. XOOPS can be freely modified, distributed and used under the terms of the GPL. It was initially developed as a portal system, but over the years, it has developed into a proper Content Management System.

XOOPS is an acronym for eXtensible Object Oriented Portal System. It can serve as a Web framework for use by small, medium and large sites. According to XOOPS.org, XOOPS is pronounced “Zoops.” It is maintained and developed by the XOOPS Foundation, a non-profit organization.

8.8.2 Features

Another modular CMS, XOOPS has developed into a fully featured CMS over the years. It offers a clean and elegant environment and offers quite a few unique features:

- XOOPS offers one of the best Module Administration systems. The interface is icon-based, and you need to install the modules according to your requirements.
- The XOOPS Download Manager is quite comprehensive and offers options for submitting content, reporting broken links and other such options. You can further modify and tweak the download manager from the Preferences menu.
- XOOPS has a basic Bulletin Board module bundled. This module is useful for those looking to offer basic support to the customers on their site.
- However, one wishes that the developers would improve upon
