

the News Management system, which lacks on features that are supported by other popular CMSes.

- XOOPS features a useful Web Links system wherein users can add, submit and rate various Web sites.

8.8.3 Installation

1. Download the latest version of XOOPS from www.xoops.org. Extract the downloaded archive. You can use WinRAR or Winzip.

2. After extracting the archive, you will get three folders named “html”, “extras” and “docs”. Copy the contents of the “html” folder into a new folder called “xoops”. Place this folder in the “www” directory in C:\Program Files\EasyPHPx-x\.

The XOOPS installation Wizard

3. Now, point your browser to <http://localhost/xoops/>. You will get the XOOPS installation wizard. Select your language and click Next. XOOPS will run a pre-installation check. Click Next again.
4. Here you will be presented with the General Configuration Wizard. Enter the database username as “root” and leave the password field blank. In the Database Name field, enter “xoopsdb”. The wizard will automatically detect physical and virtual Paths. Click Next.
5. The wizard will save the data you entered to the configuration file, and it will attempt to create a database. Click Next.

Enter your server information carefully
