

4. In this step, you will have to enter details about your server. In the MySQL Username field, enter “root”, and leave the MySQL password field blank. MySQL Database will be “e107db”, and check the “Create” box next to this field. Click Continue at the bottom of the page.

5. After running an installation check, the installer will ask you for the Administrator account details. Enter your details and click Continue. However, do remember the information you entered, as this account will be used for managing your site.

6. If you entered all the information correctly, the installation part will be complete. You will be re-directed to your e107 Web site. Go ahead and customise it!

8.10.4 Resources

There are quite a few sites offering themes, modifications and other utilities for e107.

<http://e107themes.com> offers a variety of free, elegant themes for e107.

The screenshot shows a form for configuring the MySQL database. It includes fields for MySQL Username (set to 'root'), MySQL Password (left blank), MySQL Database (set to 'e107db'), and a checked 'Create' box. To the right of the form, there is explanatory text about the MySQL server and the importance of using a unique password for the database user.

Enter your server details here

The screenshot shows a form for creating an Administrator account. It includes fields for Username, Password, and Confirm Password. A large black rectangular area is overlaid on the right side of the form, likely to redact sensitive information like passwords.

Remember the Admin details you enter here
