

and so on.

The `<p>` and `</p>` tags enable you to specify the paragraph breaks in your text. You can use as many of these tags as you need.

```
<p> Paragraph one </p>
<p> Paragraph two </p>
```

Paragraphs

The `<br>` and `</br>` tags introduce line breaks when you want to start a new line and not a new paragraph. Thus,

```
<p>Para three broken into<br>two
lines</br></p>
```

will print the text in two lines.

Breaking paragraphs into lines
