

```
Explorer")
{
    alert("Beef up your security settings!")
}
else
{
    alert("Firefox, eh?")
}
</script>
```

Example: The “switch” statement

```
<script type="text/javascript">
    var browser = navigator.appName //get the
browser's name

    switch(browser)
    {
    case "Opera":
        alert("Try the Mouse Gestures!")
        break

    case "Microsoft Internet Explorer":
        alert("Beef up your security settings!")
        break

    case "Netscape":
        alert("Firefox identifies itself as
Netscape!")
        break
    }

</script>
```

The “switch” statement takes the variable “browser” and compares it one by one to the values mentioned in the “case” statements. The “break” statement prevents the browser from
