

Hide “All Programs”

Use this hack to hide the All Programs button, which displays a list of all installed applications.

Navigate to:

HCU\Software\Microsoft\Windows\CurrentVersion\Policies\Explorer

And to:

HLM\Software\Microsoft\Windows\CurrentVersion\Policies\Explorer

Change the DWORD value of the setting NoStartMenuMorePrograms to 1 to hide the button. Default is 0.

This, obviously, applies only to the XP Start Menu and not the Classic Start Menu.
