8.3.2 Anonymizer: Anonymous Surfing

Anonymizer is one of the most effective commercially available anonymous surfing options available in the market. As an anonymous surfing suite, it has a much higher level of functionality than just a Web proxy server. As a standalone software, it not only hides your IP address, it also provides full-time SSL encryption for every transaction, giving you extra security. It comes bundled with anti-spyware options that are also very effective security measures.

8.4 Safety Over IM

Like with e-mail, instant messaging, too, suffers from the threat of malicious prowlers. IMs have become all-pervasive; this means that at every location where a user accesses his IM account, he faces the risk of being observed by a hacker. Given the different levels of security available at these areas, you never know when, or where, you might be watched.

8.4.1 Safe Chatting

There are several simple things you can do to make sure your chatting experience remains safe and secure.
