

CERT-IN is the Indian Computer Emergency Response Team, which is meant to respond to computer security incidents as and when they occur. CERT-In operates with authority delegated by the Department of Information Technology, and the Ministry of Communications and Information Technology of the Government of India. It also aims to assist members of the Indian IT community in implementing proactive measures to reduce the risks of computer security incidents. The site features white papers and presentations apart from security alerts. Clicking on the link to the left called “Vulnerability Notes” takes you to a list of vulnerabilities ordered by date.

The “Press” link takes you to a section that contains news released to the media by CERT-In.

Center for Internet Security

www.cisecurity.org

The Center for Internet Security (CIS) is a non-profit enterprise whose mission is to help organisations reduce the risk of business and e-commerce disruptions resulting from inadequate technical security controls. This site, again, is meant for system administrators in a business, but if you are interested in security issues, you can pick up some information here. Part of the focus of this Web site

the CENTER for INTERNET SECURITY
