

To use keying in Wax, you need the Chroma Key plugin. Simply drag the Chroma Key plugin from the Video Plugins tab in the top-left panel to the clip you want to apply the effect to. Now expand the Chroma Key item and select the colour you want to key out. You can also use the eyedropper tool next to the colour chooser and click on the colour in the video clip itself. It's likely that you'll end up with jagged edges the way we did, so you might need to play with the tolerance a little before you get the effect you want.

7.3 Adding The Third Dimension

The characters and objects in your video need not be the last thing you have in them. If you want to add some 3D buildings or objects, you can even get them into your clip! Nearly all post-production tools feature this, most notably Discreet's Combustion, which integrates beautifully 3ds Max. In Wax, too, you can import 3D objects in the .3ds (3D studio) format and even light them to inte-
