

6.7 Accounting

Gone are the days of ledgers and registers. The new age of accounting is done on the PC. And a good way to balance those accounts is by using one of the following Open Source alternatives.

6.6.1 Grisbi

<http://www.grisbi.org/>

Grisbi is basically a personal accounts manager. It is a simple and easy to use application and has features for all types of users. It has the ability to handle multiple accounts and currencies and transactions can also be scheduled.

Grisbi is a simple and easy to use application

Budgetary lines and reports are also supported.

It's a decent package with enough useful features for the individual user.

6.6.2 TurboCash

<http://www.turbocashuk.com/>

TurboCash is one the world's foremost Open Source accounting packages. It has a huge set of features with a number of wizards to ease the process. Mainly meant for handling accounts of small and medium size businesses it goes about its tasks very well. It can handle around 999 sets of books, accounts and sub accounts and up to 40000 debtor and creditor accounts as well. It can also handle stock items with the ability to create your own invoices. It also has a number of security features which allows you to specify dif-
