

7.1 Browsers

Browsers are the face of the Internet to most people, and so the primary way of classifying browsers is based on their graphics engine (more appropriately, a layout engine—software that takes Web content and the formatting information and displays the formatted content on the screen). Thus, you have a huge variety of browser engines, and based on them, an amazing variety of browsers.

7.1.1 Mozilla Firefox

(www.mozilla.com/firefox)

Firefox was developed by the Mozilla Foundation and many developers around the world. It is in many ways the true pioneer of the open source browser movement. It has been responsible for bringing about some of the most radical design and feature changes. As a matter of fact, Firefox has been hailed as the best alternative to other browsers such as Internet Explorer and Apple's Safari.

Mozilla's Firefox Browser

Firefox's integrated pop-up blocker, live bookmarks, and support for open standards makes life easy. The tabbed interface makes surfing multiple sites much less cumbersome than having to open multi-
