

The User Interface

Konqueror's user interface looks similar to that of Internet Explorer, but is more customisable. It works extensively with panels, which can be rearranged or added. For example, one click on the Bookmarks panel opens the bookmarked Web page on a larger pane. Panels present an alternate layout for the interface and allow the user to view Web content on different panes.

The Konqueror browser

Konqueror allows browsing the local directory, that is, the user's root directory. This can be done either by entering locations in the address bar, or by selecting items in the file browser window. It allows browsing in different views. These views are arranged similar to Windows Explorer as the views differ in their usage of icons and layout. Files can also be executed, viewed, copied, moved, and deleted.

7.1.5 K-Meleon

(<http://kmeleon.sourceforge.net>)

K-Meleon is the bantam-weight champion of the browsers. It is extremely fast, highly customisable, and amazingly light Web browser.

K-Meleon is distributed as a single executable installer which extracts all the files. The download link is <http://kmeleon.sourceforge.net/download.php>

The program keeps a per-session history stack. To see a list of visited URLs, the History
