

9.3 Fractint

<http://spanky.triumf.ca/pub/fractals/programs/ibmpc/windows/winf1821.zip>

Unzip the winf1821.zip package and run winfract.exe. There is no installation required.

Fractint is a fractal generating program—the best one there is for personal computers. Fractals are colourful patterns that get generated from very simple mathematical formulas. The beauty is that from such simple formulas, you get incredibly complex patterns, which means that these patterns are “inherent in nature,” in a manner of speaking. The study of fractals has filled entire volumes.

Incredibly fascinating patterns...

...get even more fascinating when zoomed in!

If you haven't heard about fractals thus far, an excellent introduction is available at www.cs.wisc.edu/~ergreen/honors_thesis/fractal.html.

Using the program is dead simple: first, you choose your fractal from the menu. “Choosing a fractal” means choosing the math-
