

Fun Stuff

Where there's a will, there's a way. That adage has been the guiding light of open source software development till date. Developers are exploring the limits of the open source movement, and it seems as if there aren't any! And what would a computing experience be like—open or closed source—if there weren't any fun stuff to do? Not that everything we've talked about thus far wasn't fun, but there's also a lot of open source software out there that you can use when you want to kick back and relax. Here's some software that's easy on the brain...
