

The Free / Open Source Research Community

http://opensource.mit.edu/online_papers.php

Lots and lots of papers on open source. Some obscure, some great reads, some just a little interesting.

Here's a snippet from a (typical) sample:

'Technology platforms, such as Microsoft Windows, are the hubs of technology industries. We develop a framework to characterize the optimal two-sided pricing strategy of a platform firm, that is, the pricing strategy towards the direct users of the platform as well as towards

firms offering applications that are complementary to the platform. We compare industry structures based on a proprietary platform (such as Windows) with those based on an open-source platform (such as Linux) and analyze the structure of competition and industry implications in terms of pricing, sales, profitability, and social welfare. We find that, when the platform is proprietary, the equilibrium prices for the platform, the applications, and the platform access fee for applications may be below marginal cost, and we characterize demand conditions that lead to this.'

You can, of course, submit your own paper.
