

MPlayer right-click options will give you all the info you need

not going to have any trouble finding such streams.

One bad thing is that it does not have an equaliser, which is good for those who really want to hear their music as-is, but terrible for those who like to tweak the output settings.

Overall, if you're looking for a no-frills player, which uses as little of your system resources as possible, and gives you all the basic functionality you need when playing back audio, this is your best bet. The minimum system requirements should make those with older computers very happy:

Windows 95/98/NT/2000/XP,
Linux 2.x, Pentium 100
MHz, 32 MB RAM

One of Zinf's best features is the ability to record from SHOUTcast streams
