

2. To make an audio CD, click on “New Audio CD Project”.

The files at the top part of K3b can be dropped with the mouse to the bottom widget. Another way is to right-click on a file and select Add to Project. In order to rearrange the order of the audio-tracks you can simply move the tracks with the left mouse-button. The properties of the tracks can be changed by clicking with the right mouse button and choosing Properties.

3. As soon as the arrangement of the tracks is done, click on “Burn...” in the right-bottom corner. A new window pops up. Here, you can control the settings of the burning itself.

4. You can give the CD a title by choosing CD-Text and selecting Write CD-Text, for example, Title and Performer. As soon as you are content with the settings, click on Burn.

5.4.4 ISOBurn for Windows

IsoBurn provides a light-weight, easy-to-use interface for the burning tools found in the Windows Resource Kit.

Features

The user drags and drops ISO images and burns CD/DVD from them. Before burning, it gives users the option to Erase as well. The interface is quick and clean. It is a very light utility, and easy to manipulate.

ISOBurn—nice and simple
