

identify in your online Web albums. Select the photos or group of photos you want to label with the same keywords and press [Ctrl] + [K], or go to **View > Keywords**. In the Keywords dialog box, enter all the keywords you want to associate with that group of pictures.

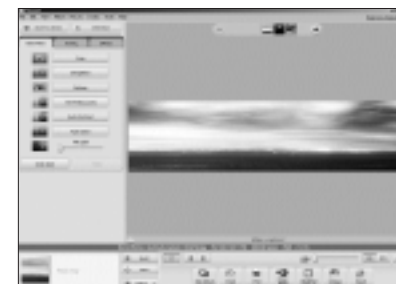

Make a Caption, or a headline, even!

If you want to hide a file or a group of files, you can select the photo or photos, and **right-click > Hide**. To unhide them, click on **View > Hidden Pictures**. This will show the hidden pictures as dim and greyed-out. You can select the photos you want and **right-click > Unhide** to make them visible again. Turn off the Hidden Pictures setting when you are done to prevent people from seeing pictures you want to stay hidden.

If you want to give a journalistic flavour to your pictures, you can give captions to your pictures in much the same way journalists do. Captions adhere to the IPTC standard, which means that the captions are saved along with your pictures and remain embedded in the picture when you send them via e-mail, share them via Hello, and so on. Captions are fully editable and appear below the picture in a bar when you are in Picasa's Edit mode. Click on the "make a caption" text to type in your caption. You can edit the caption at any time by simply clicking on the caption bar again, or delete it by clicking on the trash can at the right.

9.4 Editing Pictures

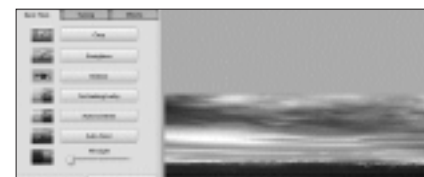

Picture editing in Picasa is simple. Some advanced features have been rendered in with easy, simple-to-use and intuitive controls that make editing pictures a breeze. To edit a picture, simply double-click on it. This will open up the picture in editing mode with the various special effects controls available at your fingertips.

A picture in the editing mode

The editing controls have been grouped into three logical sets:

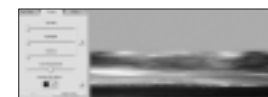

Basic Fixes are to crop and trim the picture as required, straighten skewed pictures, correct red eyes caused by flash over-exposure, an "I'm

Editing—basic fixes

Feeling Lucky" button to apply a random "fun" effect, auto-contrast to adjust the picture contrasts, auto-color to adjust the colour fidelity of the picture, and a Fill Light slider control to adjust the amount of light in the picture.

Tuning enables you to control how the lighting in the picture varies, and with its easy slider controls, enables you to adjust the controls till you get the exact effect you are after. The one-
