

Google Calendar

7.1 Introduction

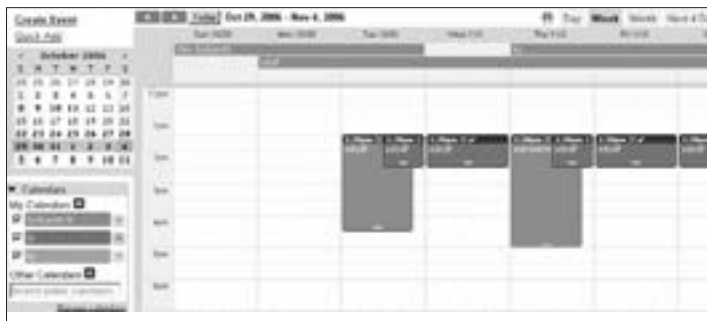

Google Calendar is part of Google's move to encourage users to shift routine tasks online. Google Calendar is a simple Appointment scheduler and Event Manager. But the addition of sharing and collaborative capabilities raises it from the mire of similar, offline products. Planning a group event with many invitees can be a challenge to any host, but thanks to Google Calendar, this need not be a nightmare anymore.

7.2 Using GC

7.2.1 Logging In

You can log in to Google Calendar with a Google ID, or add the Calendar service to your other Google services and then access Calendar with your Gmail ID and password. Like Gmail and Google Docs and Spreadsheets, Calendar, too, has an AJAX-driven interface. So expect delays after the login as the script is loaded.

The initial interface shows the Calendar in the middle; a mini calendar is displayed to the left, and below that is the Calendar

The Calendar Edit Tab
