

Helping Your Blog Along

Technorati categorises blogs by tags, so make sure that every one of your posts has one. It's not difficult—just make sure you're categorising your posts, and Technorati will use these categories as tags. If your blog host doesn't give you this feature, insert the following HTML code at the end of your post:

```
<a href="http://technorati.com/tag/yourtag" rel="tag">Some  
Text</a>
```

This tells Technorati to file this post under the tag “yourtag”. This needn't be limited to just a Technorati link, though. For example, using this code:

```
<a href="http://www.thinkdigit.com/forum" rel="tag">Some  
Text</a>
```

will file the post under the tag “forum”—the text after the last slash in the URL will be interpreted as the tag.

Most blog hosts now automatically “ping” Technorati every

The screenshot shows the Ping-O-Matic website. At the top is the logo "ping-o-matic" in a stylized font. Below it is a navigation bar with links for "Home", "Stats", and "Blog". The main heading is "Welcome to Ping-O-Matic". Underneath is a section titled "BLOG DETAILS" with three input fields: "Blog Name:" (empty), "Blog Home Page:" (containing "http://"), and "RSS URL (optional):" (containing "http://"). At the bottom is a section titled "SERVICES TO PING (CHECK COMMON)" with a grid of checkboxes and links. The links include Weblogs.com, Bloggs, Technorati, Feed Burner, Syndic8, NewsGator, Feedster, My Yahoo!, and PubSub.com.

Use Ping-o-matic to ping all the blog listings on the Web
