

time you make a new post. If yours doesn't, then you can use a pinging service like Ping-o-matic (www.pingomatic.com) to ping Technorati and all other blog directory listings.

5.1.2 FeedBurner (www.feedburner.com)

Your blog-host no doubt creates an RSS feed for your blog (ditch it if it doesn't), so readers don't need to constantly visit the site to read your content, instead doing so from the comfort of their default RSS reader. FeedBurner takes the simple functionality of RSS and "burns" your feed by adding a host of options to help you snag more subscribers.

The Burning Feed

Once you've completed the ridiculously simple registration process, you'll be asked to burn your feed by supplying the URL of your blog's RSS feed. Configure your feed title, and your feed will be assigned a FeedBurner URL instead—<http://feeds.feedburner.com/yourfeedaddress>, for example, letting you customise the "yourfeedaddress" part.

A screenshot of the FeedBurner registration completion screen. The text reads: "For your convenience, FeedBurner has applied the following services to your new feed:" followed by two bullet points: "» BrowserFriendly improves your feed's appearance in most web browsers and makes it easy to subscribe to" and "» StandardStats tracks basic feed traffic statistics". Below this, it says "You control your feed. All services are optional and can be changed at any time." Then, "You have completed Step 1 of 2. In Step 2, you may consider upgrading to TotalStats PRO for a more richly detailed view of your feed reader statistics." At the bottom, there is a button labeled "Next »" and the text "or Skip directly to feed management".

For your convenience, FeedBurner has applied the following services to your new feed:

- » **BrowserFriendly** improves your feed's appearance in most web browsers and makes it easy to subscribe to
- » **StandardStats** tracks basic feed traffic statistics

You control your feed. All services are optional and can be changed at any time.

You have completed **Step 1 of 2**. In Step 2, you may consider upgrading to **TotalStats PRO** for a more richly detailed view of your feed reader statistics.

Next » or Skip directly to feed management

Once you've claimed your blog, FeedBurner enables the BrowserFriendly and StandardStats services to make your feed more readable in browsers and track your feed statistics respectively
