

3. Writing for the Web

(<http://www.useit.com/papers/webwriting/>)

Again from Dr Nielsen, a collection of resources and links on how to write for the web.

Writing for the Web

Research on how users read on the Web and how authors should write their Web pages

- Short summary of the original findings. How users read on the Web: [READ THE RESEARCH](#)
- Guidelines for reading Web content, as seen in eye-tracking studies
- Guidelines of people reading online newspapers
- Six guidelines which affect different behaviors
- The first point focuses on corporate websites (12 design guidelines based on usability studies of how someone visit company sites)
- User navigation (12 design guidelines, sometimes even more important than for websites)
- Goals, usability goals, and comprehension strategies
- Research on the Web: poor reading ability and low technical levels mean that you tend to be ultraconcise for focus and that more information must be communicated in images
- Writing style: what's the site about?
- Use old research when writing to be found in search engines
- Discussion: writing guidelines, user styles, and email subject lines
- How to write Internet portals in subspaces
- Information structure
- General usability, including guidelines for internet content, input on internet, HR manuals, and how to present information about people, teams, and individuals on internet
- Full paper: summarizing the original research from 2001 (links: [CONCEPTS](#), [SUMMARY](#), and [DISCUSSION](#) [How to write for the Web](#) (unfortunately this paper was written for print and not online))
- New study: [Reading online headlines to find cases improved usability by 140% when rewriting sample pages from a popular website](#)

Other Writing Sites

Our research shows that authors often embrace the credibility of a site, so look to some other good sites about how to write for the Web: -)

- [Good documents.com](#): a site affiliated with the Invisio site authoring tool but their advice applies even if you use other tools. Good in writing for intranets and other online internal sites

4. Getting Things Done

(<http://www.davidco.com/store/catalog/>)

In a busy, busy, busy day, finding time to spend on your blog is going to be the biggest problem. Getting Things Done is a very popular time management philosophy developed by veteran productivity guru David Allen. Visit his company's store catalogue for some free articles that can help you organise your time better. If
