

Sony Ericsson's PC Suite has a clean and simple interface

In order to update your firmware, we suggest that you download the latest version of the Sony Ericsson PC Suite and the Sony Ericsson Update Service utility, which are about 40 MB and 23 MB downloads respectively. We've provided the latest versions in this month's DVD, but if you plan to repeat this procedure in a few months (as you should, to keep your software up to date) make sure you get the latest version of the Update Service utility—the SEPCS will keep updating itself automatically.

Here as well, you should have a fully charged phone, at least a 1 GHz CPU, 512 MB of RAM, and we recommend Windows XP (Home or Professional) as the operating system. You should also have the USB cable that comes bundled with your phone (if not, you will have to get yourself a USB connector that's compatible with your phone).
