

Windows in Instant

Besides all the standard features, this CPIMC supports video chat across different clients. For video chat, quite ingeniously, the receiving party is provided a link to a Web page where the video chat can take place. The distracting Flash animation at the bottom of the client window cannot be removed, but it can be stopped from looping endlessly.

5.7.3 Trillian

(www.ceruleanstudios.com)

Trillian is available in free and paid versions. Only the paid version sports all the features of the client, while the free version offers all the essential features except for video chat.

Windows in Trillian

5.7.4 Other chat clients

5.7.4.1 Yahelite (www.yahelite.org/)

Yahoo! is the only IM network that offers public chat rooms. Unfortunately, one's experience in these rooms is marred by bots that send automated messages, mostly ads. Yahelite is the solution. It does a good job to keeping the chat session clean. It also supports voice chat. Navigating to different chat rooms is a bit circuitous compared to the original Yahoo! IM client, though.

5.8 Anti-spam Applications

Though some e-mail clients already have anti-spam measures, dedicated anti-spam programs are also available to bolster the defence.
