

Trend/Regression Type options are displayed. Select one out of Exponential, Linear, Logarithmic, Polynomial, Power, and Moving Average. For the Polynomial type and the order and Moving Average type, the period can be customised as required—in our case, Linear type. Next you can provide the name by clicking Custom in the Trendline Name options.

Trendline options

In the Forecast Area, select either Forward or Backward as the display period, and then add 2 in the Forecast area. Click OK, and the trend line will be visible on the chart.

6.7 Creating, Re-arranging, And Formatting PivotCharts

PivotTables are hard to make, and can look like a screen filled with boring data. You can jazz it up by creating a PivotChart. Creating a PivotChart can be fun if you've already made a proper PivotTable.

Click on Insert, then go to **Tables > PivotChart**. Select any cell in the PivotTable and go to **PivotTable Tools > Options > Tools > PivotChart**. In the Insert Chart dialog box, select a type of Chart and click OK. You will now see a PivotChart with the PivotChart Filter Pane. Here, you have the following options: Report Filter, Axis Fields (Categories), Legend Fields (Series), and Values (Sum Total). If you want to add a PivotTable Field List in the worksheet, click on the button next to "Active Fields on PivotChart".

From the PivotTable Field List, you have three options to customise the data series:

1. Drag-n-drop the data series in the Area Selections box
2. Check-uncheck the check box of that particular data series, or
