

Formula AutoComplete is another useful feature along the same lines as the Mini Toolbar. It is a window that pops up next to the cell whenever a user begins to type out a formula in it. The window contains a list of functions matching the letters typed by the user, with a brief description of what the function achieves. On selecting a function, the window displays the syntax of that function, thus decreasing the chances of the user making an error.

Auto-completing formulae

The configurable Quick Access Toolbar appears at the top left, next to the Office Button. It is a placeholder to add buttons for easy one-click access. If required, buttons can be added to or deleted from the toolbar, by using the adjacent Customize button. The Toolbar by default has a file save, undo, and redo buttons.

The Quick Access Toolbar

Zoom and Page View controls

Other thoughtful touches include the much easier zoom control. This is now present as a horizontally sliding control at the bottom left of the window. Next to the zoom control is the Page View control, which can be used to check the Page Break preview and the print page layout with one click.

1.2.3 Features

Live Preview is a useful feature in the new UI. Unlike earlier versions where the results of formatting would be visible only after they were applied, in this version, just hovering the cursor over a
