

important. When, for example, your cursor is in cell A1, and your macro consists of typing in “Digit”, there are two possibilities:

- (a) With the “Use Relative References” button not depressed, running the macro will produce the text “Digit” in whichever cell you are in at the time you run the macro, say H16.
- (b) With the button depressed, the macro will record the relative position. So if your cursor was in cell A1 when you began recording, and you typed in “Digit” in cell A2, then, when you run the macro with your cursor in cell H20, you’ll get “Digit” in cell H21.

Use “Show Developer tab in the Ribbon” from the Office Button, as explained

If you’re looking for a single button to record macros, you’ll need to add the Developer tab to the Ribbon. Simply click **Office Button > Excel Options**, then click “Show Developer Tab in the Ribbon” on the Popular tab. Click OK.
