

the View tab. (If you can't find it, press [Alt] > [W] > [U].) The Unhide dialog box will open, showing the PERSONALB workbook in its Unhide Workbook list box. Click PERSONALB in the list box and press [Enter].

In general, to open a macro for editing, press [Alt] + [F8] which, like we said, opens the Macro dialog box. You'll find that you can click on a macro name and try to edit it, but if the macro is in a non-open worksheet, you'll get a dialog saying you can't edit it and that you need to un-hide the workbook first. Do this the same way you'd un-hide the PMW.

7.5 Editing With The VBE

Do the following. Begin recording a new macro; position your cursor in cell A1, and type in "I am recording a macro." Then colour it reddish-brown, underline it, give it a font, and make it larger. Stop recording the macro.

You know what the macro will do—when you press the short-cut key, it will bring up that text in that style in that location (unless you used a relative location). Now, open the VBE, and in the appropriate module, find the code for the macro, which will be something like this:

```
Sub Macro2()  
,  
' Macro2 Macro  
' Macro recorded 01/01/1970 by digit_fan  
,  
' Keyboard Shortcut: Ctrl+Shift+A  
,  
ActiveCell.FormulaR1C1 = "I am recording a macro."  
Range("A1").Select  
With Selection.Font  
    .Name = "Cambria"
```
