

Don't forget to play around with the shape effects!

8.3.2 Holding [Ctrl] + [Shift] on the keyboard, left-click and drag it diagonally across the worksheet till you reach the desired size of your smiley. Now you can colour your smiley based on your preferences.

8.3.3 Go to **Insert > Shapes** and choose any shape under Callouts.

8.3.4 Holding [Ctrl] + [Shift], left-click and drag the mouse diagonally across the worksheet till you reach the desired size of your callout. Now you can colour your callout based on your preferences. Don't forget to play around with the Shape Effects.

8.3.5 After that is done, click onto the callout to bring-up the **Drawing Tools > Format** menu. In there, click **WordArt Styles > Text Fill** and enter "Hello World" as your text.

You have now officially mastered the art of formatting graphic objects in Excel 2007!

8.4 WordArt

WordArt is another good feature in Excel 2007. This used to be the most underestimated feature of Excel, promising much more than it offered. Not any more. Thanks to the new formatting options which have been incorporated into the WordArt functionality, this option has become more powerful than ever before.
