

The Function Library in Excel

Engineering, Cube, and Information are advanced topics, and we will not cover them. You can find examples and explanations of those functions in the Excel help section.

Other than these above categories there is also the Recently Used button, which will show you a list of functions that have been recently used in Excel, as well as the AutoSum button. Clicking on the arrow next to the AutoSum button, you can get access to not just the Sum function but also to the Average, Count, Min, and Max functions as well. This is an improvement over earlier versions of Excel where you could only get access to the Sum function by clicking on the button. (See the Math & Trigonometry section for more on these functions.)

Choosing your function

You also have the “fx Insert” function button that enables you to search for and select a function. Click on the button, and in the pop-up window, you’ll have multiple choices.

First, you can type in a brief description of what you are looking for in the function, and Excel will give you a list of possibilities based on matching keywords. Of course, this means you will need to be as precise and accurate as possible in the terminology you use. The search feature is useful when you do not know which category the function belongs to: if you do know the category, you can select one from the category drop-down list, and
