

information. Select the range and click Nnext.

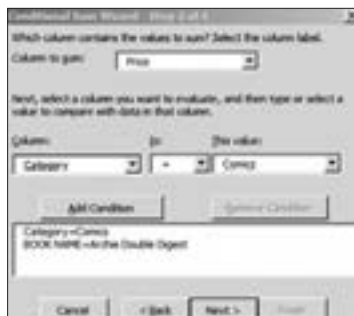

In step two, Excel will try to intelligently guess which column contains the information to be summed up, and will provide you with a drop-down list of the columns with the specific criteria that you want to set. Once you've specified your selection, click next.

In step three, you can decide whether you want to copy the result to a single cell or copy the formula and its conditional values also. We've selected to do the latter. Click Next.

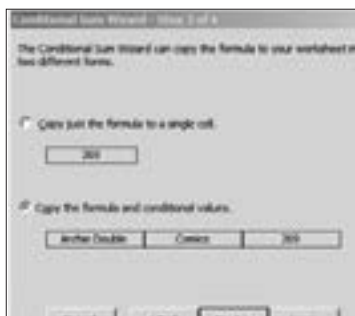

In step four, you select or type in the cell reference where you want the result to appear. Make your selection and click Next. Excel will now ask you to select the locations where you want to place the conditional text values you have specified. Depending on
