

the number of conditions specified, Excel will ask you for the locations to place each of them. When you are done, click Finish.

F	G	H	I
Archie Double Digest	Comics	269	SUM(F(\$B12:\$B558)=F1,F(\$C12:\$C558)=G1,\$D12:\$D558,8))
Archie-Single Digests	Comics	907	SUM(F(\$B12:\$B558)=F2,F(\$C12:\$C558)=G2,\$D12:\$D558,8))
	Biographies	942	SUM(F(\$C12:\$C558)=F3,\$D12:\$D444,8))
	Indian Authors	1023	SUM(F(\$C12:\$C558)=F4,\$D12:\$D456,8))

A list of totals using the Conditional Sum Wizard

Similarly, you can run the Wizard again and build a list of totals based on conditions that you have specified.

AVERAGE(number1,number 2, ...), MIN(number1,number 2, ...), MAX(number1,number 2, ...)

The Average, Minimum, and Maximum function calculate the average, minimum, and maximum for a given list of numbers, respectively. If you have a long list of numbers, simply enter the function in a new cell and specify the range, or individually select each cell you want to include in the calculation. Example: =AVERAGE(A1:A10,B1:B5). Note that you can quickly access all three functions from the AutoSum drop-down button (Formulas tab, Function Library group).

COUNT(value1,value2,...), COUNTA(value1,value2,...), COUNTBLANK(value1,value2,...)

The COUNT and COUNTA functions count the cells that contain data. The difference between COUNT and COUNTA is that COUNT will only count those cells with numeric entries, while COUNTA will count both numeric and text entries. The COUNTBLANK function, as the name suggests, will count only the blanks in the list.

COUNTIF(range, criteria)

Similar to the SUMIF function, the COUNTIF function counts the cell in a range based on specified criteria. The range argument as the name suggests requires you to specify a range of cells over which you will apply the criteria argument. The range argument
