

float, etc. In the third example, Excel searches for all cells that contain the word ending in “eat”—e.g. treat. Note that with the wild card “?” words like meat and feat will fail, since there are two question marks specified in the search criteria, so only words with two letters and ending in “eat” will be counted.

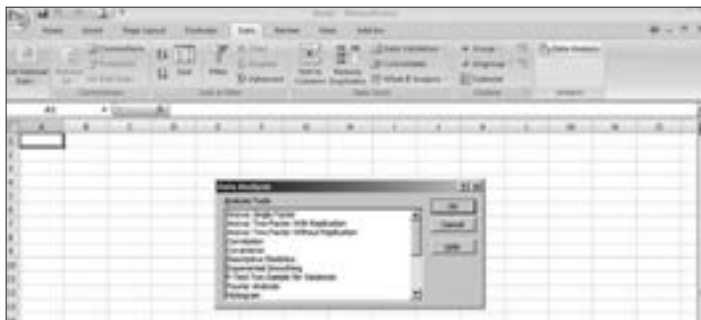

For those wanting to get into advanced statistical analysis, there is also the Analysis Toolpak add-in. This is available from the Add-ins window, under Excel Options, which is accessed by clicking on the Office button. At the bottom of the Add-ins window, select Excel Add-ins from the drop down next to “Manage:” and click Go.... Select the Analysis ToolPak checkbox and click OK.

The Excel Add-in Box

Once you’ve activated the add-in you can now access all these advanced functions by clicking on the Data Analysis button in the Analysis group on the Data tab.

What we have covered in this chapter is but a sampling of the

Single-click access to advanced statistical functions
