

precaution, it is a good idea to do this every time you open your main workbook.

Alternatively, in the Data tab, in the Connections group, select Edit Links. All the links in the workbook that connect to external workbooks will be displayed in the pop-up. You can then choose to update all the links, or selectively decide which you want to update and which not to.

Security restriction for updating external links

3.6 3D References

A 3D reference is where the data is in the same location on multiple worksheets. For example, in the figure, there are three marketing budgets for three departments: electronics, foods, and retail. They are identical. They are identical, and the data in all the cells refer to the same budget heads.

Three similar worksheets

For example, to get the total for Personnel Budget for all three departments per month, you can do the following. Click on the January Personnel Budget cell (B5), type "=", followed by SUM(), set the cursor to within the brackets, with the cursor blinking inside the brackets, click on the first worksheet tab "Marketing Budget -
