

ignore when the error is repeated. These errors will be hidden from you, and you will need to manually reset it if you want to see them. To do this, click the Microsoft Office Button and select Excel Options, click on the Formulas tab, and under the Error Checking section, click Reset Ignored Errors.

Reset errors to be able to see them again

In the Error Checking Rules section, check or clear all the rules that you want Excel to use to check for errors.

You can also get Excel to check for errors one at a time, much like a grammar error checker. If you want Excel to recheck all the errors first, reset the ignored error check. Next, select the worksheet you want to check for errors, and on the Formulas tab, in the Formula Auditing group, click on Error Checking. The Error Checking dialog box is displayed and it will take you to the first error in the worksheet. The dialog box will show the formula (or a part of it if it is too long), a diagnosis of the error, offer a suggestion on what is to be done, provide additional help, and provide the option to ignore the error or edit in the formula bar. You can make your choice on what action to take and then click Next to go to the next error.

If you want Excel to display errors as you work, ensure that the Enable Background Error checking checkbox is ticked in **Excel Options > Formula**. Now when an error occurs with a formula, Excel will instantly display an icon of a golden-coloured diamond shape with a red icon inside it. This means there is an error in the formula and that it needs to be corrected. Clicking on the icon will
