

4.2 Sorting and Filtering

You'll often find yourself needing to sort and filter data in Excel. The Tools to perform Sorting and Filtering operations on a range of cells are in the Sort and Filter

Multi-level sorting

block under the Data Tab. These are also accessible from the Sort and Filter button in the Editing Block under the Home Tab.

4.2.1 Sorting

To sort a range of cells, you select a cell in the column to be used as the sorting criterion, and click on the Sort Ascending or Descending button in the Sort and Filter Block. Alternatively, you can right-click on the cell and use the Sort menu to choose the desired sorting operation. The

Sort Options

Alternative Menu offers more sorting options, like sorting based on cell colour, font colour, and cell icon (allotted by Conditional Formatting using Icon Sets).

Since the above allows only one sorting key column, if more complex sorting rules are to be applied, you can use the Sort button in the Sort and Filter block. This opens a window that allows multiple levels of sorting. By default, one level is already presented, and more can be added by using the Add Level button. Under the possible Sort Key criteria, you'll see that Cell Colour, Font Colour, and Cell Icons can also be used. Under the Order drop-down, you can specify the sort order.

The sequence of the sorting levels is important. Controls to change the sequence are also available in the same window. While there exist quick access button to sort columns with a single click,
