

added or deleted from the table you need not change the cell reference range in your PivotTable, something you'd have to do if you specified just a cell range or used a name for the range. Because you are using a table name, Excel will automatically include or exclude any data rows added or deleted from the Excel Table. See Chapter 3 to learn about Excel Tables.

In the below example, the sales for October 2006 is an Excel Table with the name “Sales_Oct06”. This makes it easy to keep track of the data when any additions or deletions need to be done.

Creating a PivotTable

You also have the choice of choosing another data source by clicking on “Use an external data source” radio button. External data can come from many sources including text files, from databases like Access and SQL Server, from Web sites, and many more. If your data is not in Excel, you can import the data using the connection tools in the Get External Data group on the Data tab.

Finally, you can have the PivotTable on the same worksheet or on a new worksheet. Select “New Worksheet” and click Next or “Existing Worksheet”, specify a location, and click OK. An empty PivotTable report is added to the location you specified.
